Machine English Paper Piecing

July 16, 1 - 4:00
Aldersgate Methodist Church, Reed Room
Anne Cann

Technique invented by Karen Stone, adapted from an article by her in American Quilter May 2012.

Tools & Supplies

Fabric scraps
Spray starch
Washable glue (Elmers works, or glue pen)
Iron and Ironing pad or board
Scissors or rotary cutter and pad
Invisible thread
Regular thread
Zig-zag sewing machine
Small craft iron if you have one
Straight pins

Project will be a hexagon block. I will provide copies of the block and paper templates for the hexagons.

Technique

Using the paper templates, cut pieces of fabric, adding approximately ¼ inch seam allowance on all sides.

Spray starch each piece and with a dry iron, lay the template on it, and fold over and press every other side (3 sides folded, 3 sides not folded)

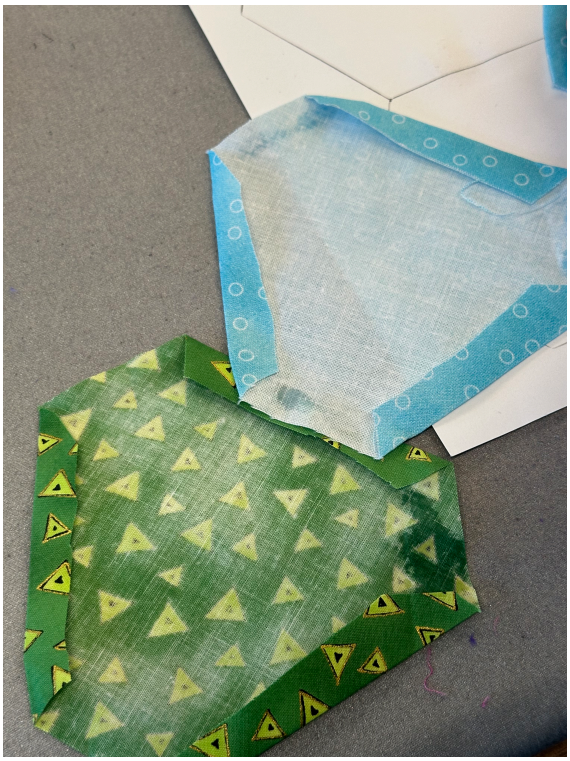

Once the pieces are dry, you can take out the paper templates and reuse them to make more hexagon pieces

Put the paper copy of the block on ironing surface and stick straight pins at every intersection.

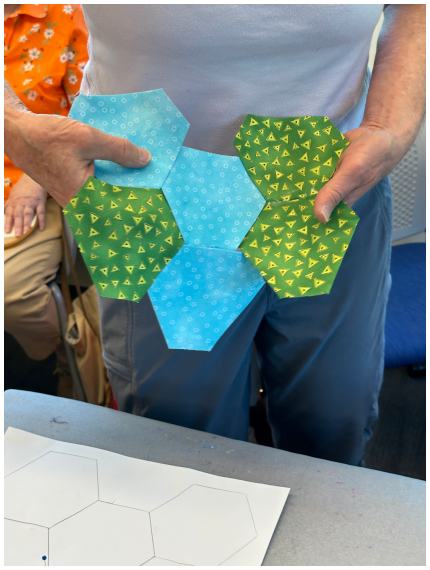

Arrange the pieces between the pins, overlapping the folded edges with the non-folded edges.

Use glue to fasten the seams together and set it with the craft iron, or other iron.

When cooled and dry, lift the block off the paper, take it to the sewing machine, and zig-zag stitch all seams. Use invisible thread on the top and regular thread on the bobbin. You may need to lower the tension to get the invisible thread to feed properly.
